

BASE4
SECURITY

Your cyber ally

CLOUD SECURITY

We identify and correct cloud risks to reduce cyber-attacks

DIFFERENTIALS

01

Utilization and management of multiple market-leading cloud providers

02

Highly certified engineers in leading brands

03

We provide services to multiple sectors or industries in a cross-sector or cross-industry manner

04

Experienced in technology implementation & management

05

Support from our CyberSoc team that provides the Platform Management Service (MSS)

Cloud Architecture

Secure and scalable infrastructures from the ground up. Implement cloud infrastructures following the highest security standards from the beginning of each project, we use recommended security frameworks

PROCESS

- Design and implementation of a secure cloud architecture based on leading frameworks
- Initial configuration with the best security practices to prevent threats
- Ensured scalability for continuous growth without compromising security

OUTSTANDING FEATURES

Integration of security frameworks such as Azure, AWS and Google Cloud Architecture Frameworks

Architectures designed to meet security and regulatory requirements

Integrated security to optimize the management and protection of your resources

Why choose our service?

- Deployment of cloud infrastructures with robust security standards from the start
- Scalable and efficient implementation to manage the growth of your business
- Increased resilience to threats by following the best practices of each cloud provider

Contact Us

Entra ID and Office 365 Assessment

Protect your identity in the cloud and on premise. Identify and mitigate risks that compromise the security of your directory services, both in the cloud and on-premises environments

PROCESS

- Detailed audit of the identity and access infrastructure
- Identification of risks and vulnerabilities
- Report with recommendations and customized corrective actions

OUTSTANDING FEATURES

Complete security assessment on Entra ID (Azure AD) and Office 365

Review of configurations and access policies

Updated recommendations against the latest threats and risks

Why choose our service?

- Protecting the integrity, availability and confidentiality of your identity provider
- Mitigation of vulnerabilities and risks in hybrid environments
- Application of industry best practices to address emerging threats

Contact Us

Assessment Cloud

Improve the security and efficiency of your cloud resources. Review and report misconfigurations in your cloud resources, following vendor-specific best practices and information security standards

PROCESO

- Análisis de la configuración de recursos en la nube
- Identificación de vulnerabilidades y brechas de seguridad
- Entrega de un plan de remediación categorizado por nivel de criticidad

OUTSTANDING FEATURES

Comprehensive evaluation of multi-vendor cloud configurations (AWS, Azure)

Identification and prioritization of risks based on urgency and criticality

Detailed remediation plan for efficient vulnerability remediation

Why choose our service?

- Correction of vulnerabilities and incorrect configurations that could expose your data to attacks or leaks
- Compliance with data protection and privacy regulations
- Optimization of resource performance and availability, minimizing interruptions and security incidents

Contact Us

Comprehensive Cloud Posture Management

Continuous monitoring and protection in the cloud. We perform continuous security assessments, detecting incorrect configurations and bad practices that could compromise your resources

PROCESS

- Continuous analysis of the configuration of your cloud resources
- Real-time vulnerability and compliance risk detection
- Implementation of improvements to strengthen the security posture dynamically

CARACTERÍSTICAS DESTACADAS

Continuous evaluation of cloud configurations to identify and correct risks

Integrated solutions to manage both security and compliance

Single platform for resource management in public, private and hybrid environments

Why choose our service?

- Comprehensive security posture management in cloud and hybrid environments
- Continuous protection of data, applications, identities and workloads from a single platform
- Constant monitoring to detect vulnerabilities and ensure regulatory compliance

Contact Us

Hardening Cloud

Strengthens the security of your cloud assets. Improve the security posture of your cloud resources by applying the latest updates and protection features to prevent exposure to unauthorized users

PROCESS

- Complete review of your current cloud asset configurations
- Implementation of updates and security hardening
- Monitoring and continuous improvement of safety posture

OUTSTANDING FEATURES

Implementation of best security practices in AWS & Azure

Constant updating of security features to maintain protection

Proactive review and adjustment of configurations to prevent vulnerabilities

Why choose our service?

- Configuration hardening to prevent unauthorized access and protect sensitive data
- Continuous improvement of visibility and management of resources in the cloud
- Early correction of incorrect configurations to minimize risks

Contact Us

Why choose BASE4 Security?

> **Service guarantee**

We provide a measure of security and confidence in the quality of our cybersecurity services.

> **Backed by globally renowned talent**

Our certified and award-winning company culture is chosen by people of high caliber and technical recognition.

> **Consultative service**

We offer customized solutions to address specific cybersecurity challenges or needs.
